VIBROPLEX®

Since 1890

the "Presentation"

Vibroplex® is pleased to offer the finest quality semi-automatic key available. The "Presentation" is our top-of-the-line model and represents the pinnacle in quality appearance as well as in signal generation and sending ease.

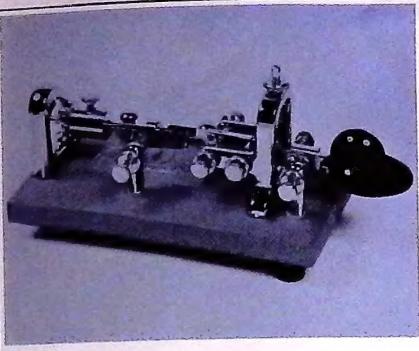

Its jeweled movement assures smooth performance and eliminates the potential for binding. As in fine watches and other precision instruments, the jeweled movements serve to maintain smoother, easier operation and prolonged life.

Incorporated only in our "Presentation" model is a super-speed control main spring. This feature affords a wider range of speed than ever before obtained in a semi-automatic transmitting key. From less than 20 WPM to 55 WPM and beyond, without sacrificing signal quality, or causing pendulum drag, this key performs flawlessly.

The "Presentation" Vibroplex® is beautifully designed, with bright polished chromium parts mounted on a 24 carat gold plated base top. Available only in this super-deluxe model for the discerning operator.

Our "Presentation" model spares nothing; all options are available at no extra charge.

When you demand the best, you want the Vibroplex "Presentation".

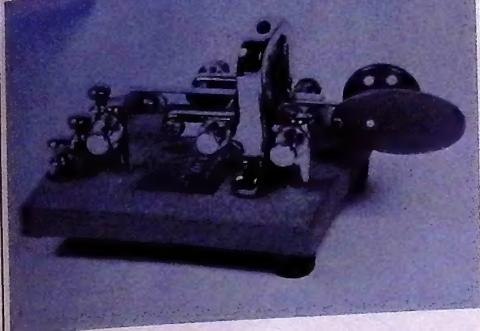

the "Original"

The "Original" Vibroplex® is suitable for all classes of transmitting work, where speed and perfect code are desired. Experienced operators - on land and sea and in the air - have put their stamp of approval on Vibroplex® keys for clarity, speed and sending ease.

Just press the lever and Vibroplex® does the rest. Speeds as low as 20 WPM or less can be sent with the medium speed lever or as high a rate of speed as desired, without loss of quality of signal, thus ensuring easy reception under all conditions. If you can send on the regulation key, you can send better, faster, and with half the effort on the Vibroplex.®

Deluxe Model - Chromium base and top parts, with jeweled movement.

Standard Model - Chromium top parts with a topaz base.

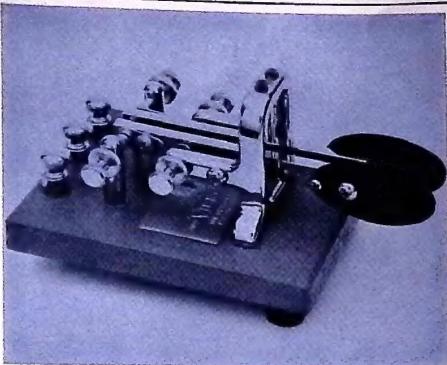

the "Vibro-Keyer"

The "Vibro-Keyer" is a response to the many requests for Vibroplex® parts to be used for construction of a keying mechanism for an electronic transmitting unit. The "Vibro-Keyer" is a beautiful and most efficient result of these requests and is ideal for this job. The Vibro-Keyer uses the same main frame and chrome finished parts as the Vibroplex® keys with large size contacts and the same smooth and easy operating Vibroplex® trunion lever. A real gem adjustable to suit your own taste.

Deluxe Model - Chromium top parts and base with jeweled movement.

Standard Model - Chromium top parts with topaz base.

the "Vibroplex Iambic"

At last Vibroplex has available an iambic paddle. We've taken our distinctive look and quality and molded it into the finest iambic paddle anywhere. Choose a Deluxe Model for its smooth jeweled movement and flawless chromed base; or the Standard Model with its neat, crisp textured painted base. Vibroplex offers only the best.

Deluxe Model - Chromium top parts and base with deluxe jeweled movement.

Standard Model - Chromium top parts with grey textured painted base.

In 1890, telegrapher Horace G. Martin invented the VIBROPLEX semi-automatic key, or "bug", in response to the difficulties and fatigue problems associated with the straight key.

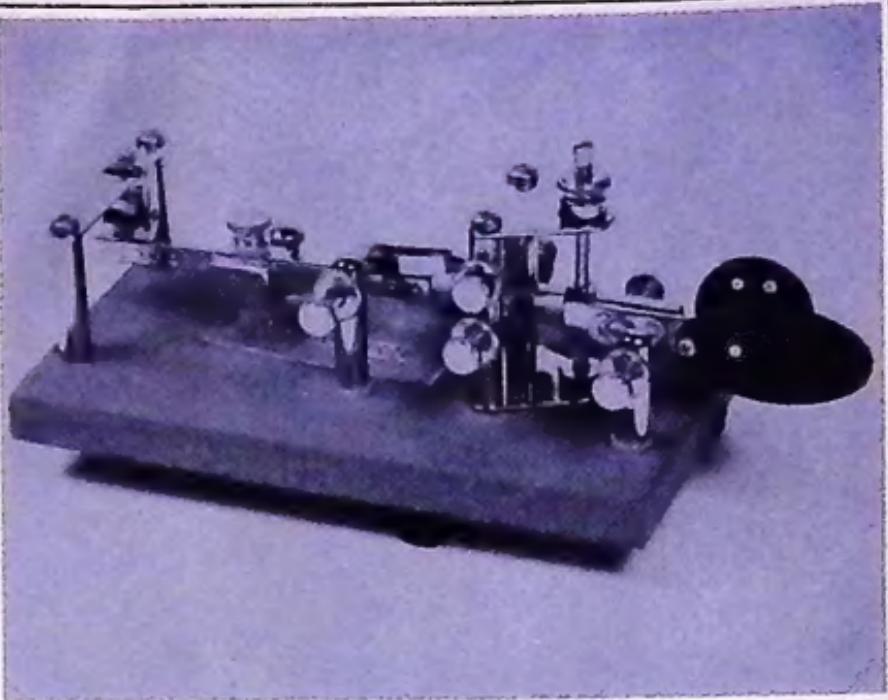

This was the first significant improvement in code transmission since the birth of telegraphy and the straight-key invented in the 1840's by Samuel F. B. Morse. The VIBROPLEX "bug" became the standard with telegraphers . . . was handed down from professional telegraphers to amateur radio operators . . . and became a legend in its own time. The Vibroplex key is still unmatched for quality, feel, simplicity, performance, and satisfaction.

The VIBROPLEX key has come to represent the one piece of equipment in the ham shack that symbolizes the interest, camaraderie, and esprit de corps of the world-wide ham radio community. Even in this age of electronics, the heritage of Vibroplex has been passed down from generation to generation in the service of professional and amateur radio operators who demand quality.

Discover why.

the “Lightning Bug”

The “Lightning Bug” Vibroplex® is for those operators desiring a flat pendulum speed control arm. The arm is marked for easy reference to allow operator to quickly position weight to his own speed setting. Great for situations where multiple operators, such as clubs, want to vary the speed adjustment for individual preference. **Deluxe Model - Chromium top parts and base with jeweled movement.**

Standard Model - Chrome top parts with topaz painted base.

the “Champion”

(Not Pictured)

The “Champion” Vibroplex® is our economy model. But don’t feel that economy means we took quality away. The same quality goes into all Vibroplex® models, or they don’t bear our name.

Similar to the “Lightning Bug”, with a flat pendulum weight arm, the “Champion” Vibroplex® offers economy and quality at the same time.

Standard Model only. Chrome top parts; Topaz crystal base.
